#### Antiasthmatic; Antiallergic; Immunosuppressive; IgE; dog; asthma; anaphylactic shock; 5.91 monoclonal antibody; 3.76 monoclonal antibody. Canis familiaris. Dog IgE epitope recognised by monoclonal antibody 3.76, SEQ ID 9 ADR10609; ADR10609 standard; peptide; 18 15-JAN-2004; 2004WO-US003566 05-AUG-2004. WO2004065936-A2 21-OCT-2004 (first entry) ₽

The present invention relates to a novel monoclonal antibody (I) that specifically binds to a mammalian IgE epitope, where the epitope is between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE. (I) is useful for testing an allergen reactivity of an IgE sample. The allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut and corn allergens. The sample is a biological sample collected from a dog, cat or horse. (I) is also useful for detecting mammalian IgE and fo treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal antibodies recognise epitopes on canine IgE corresponding to amino acid residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from

for

Novel antibody that specifically binds to mammalian IgE epitope, useful for testing an allergen reactivity of IgE sample, detecting mammalian IgE or treating asthma or anaphylactic shock.

WPI; 2004-593545/57.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ព្រះព្រះជន
                                                                                                                                       The present invention relates to a novel monoclonal antibody (I) that CC specifically binds to a mammalian IgE spitope, where the epitope is CC between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE. CC (I) is useful for testing an allergen reactivity of an IgE sample. The CC allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut CC and corn allergens. The sample is a biological sample collected from a CC dog, cat or horse. (I) is also useful for detecting mammalian IgE and for CC treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal CC antibodies recognise epitopes on canine IgE corresponding to amino acid CC residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the CC canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from CC cat, horse, pig and human by 5.91 and 3.76 was examined. Both 5.91 and CC of IgE from cat and horse, but did not exhibit cross-reactivity with CC either pig or human epsilon-chains of IgE. The present sequence is the CC cat IgE 3.76 recognition site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel antibody that specifically binds to mammalian IgE epitope, useful for testing an allergen reactivity of IgE sample, detecting mammalian IgE or treating asthma or anaphylactic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cat, horse, pig and human by 5.91 and 3.76 was examined. Both 5.91 and 3.76 were observed to have good cross-reactivity with the epsilon-chain of IgE from cat and horse, but did not exhibit cross-reactivity with either pig or human epsilon-chains of IgE.

                                                                                                                          The present invention relates to a novel monoclonal antibody (I) that CC specifically binds to a mammalian IgE spitope, where the epitope is CC between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE. CC (I) is useful for testing an allergen reactivity of an IgE sample. The CC allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut CC and corn allergens. The sample is a biological sample collected from a CC dog, cat or horse. (I) is also useful for detecting mammalian IgE and for CC treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal CC antibodies recognise epitopes on canine IgE corresponding to amino acid CC residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the CC canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from CC 3.76 were observed to have good cross-reactivity with the epsilon-chain CC of IgE from cat and horse, but did not exhibit cross-reactivity with CCC sheep IgE 3.76 recognition site.

The protein of the invention may be useful for the treatment of diseases such as arrhythmia, asthma and dementia. The present sequence is the amino acid sequence of a peptide fragment of human protein 36-41 which was used in the exemplification of the

cc antibody that specifically binds to equine immunoglobulin (Ig)E), the six cc polypeptides are not explicitly identified in the specification. Also cc included are a composition comprising an antibody that specifically binds to equine IgE made by the process of immunising an animal with a polypeptide at least 80% identical to (S1)-(S6), an antibody that specifically binds to equine IgE made by the process of immunising an cc antibody that specifically binds to equine IgE (involving immunising an cc amimal with a composition further comprising an isolated polypeptide (the camino acid sequence of the polypeptide is at least 80% identical to (S1)-(S6), making an cc amino acid sequence of the polypeptide is at least 80% identical to (S1)-(C (S6)), and collecting antiserum from the animal) and a kit for detection of equine IgE in a biological sample comprising the antibody and means (C thus forming an antigen/antibody complex, and detecting the polypeptide (serum) which involves contacting the sample with the antibody, to equine IgE protein in a biological sample (serum) which involves contacting the sample with the antibody, to equine IgE and a server as a diagnostic test for altered such that the complex can be detected. The complex. The antibody and antigen are complex can be detected. The complex is detected using a second labelled can be an erver as a diagnostic test for allergy. The present complex is a Horse immunoglobulin E, IgE, heavy chain immunogenic peptide from the middle portion of the C2 region.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a novel monoclonal antibody (I) that specifically binds to a mammalian IgE epitope, where the epitope is between amino acids 145-166 or 336-374 of mammalian IgE, e.g. dog IgE. (I) is useful for testing an allergen reactivity of an IgE sample. The allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut and corn allergens. The sample is a biological sample collected from a dog, cat or horse. (I) is also useful for detecting mammalian IgE and for treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal antibodies recognise epitopes on canine IgE corresponding to amino acid residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from cat, horse, pig and human by 5.91 and 3.76 was examined. Both 5.91 and cat, horse, pig and human by 5.91 and 3.76 was examined.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel method for the identification of a cherapeutic compound. The method involves providing test cells that cexpress a target protein containing a DEF domain and MAP kinase; culturing the cells in the presence of growth factor, cytokine, tumor compounter or oncogene; contacting the cells with a candidate compound; and assessing the binding of the MAP kinase to the DEF domain relative to the binding in the absence of the candidate compound. The invention further comprises a method for the identification of a therapeutic compound; a compound for treatment of cancer, which involves administering a compound that inhibits the binding of a MAP kinase to the DEF domain of a target protein; and an antibody that specifically binds to phospho-T-325 c-Fos (preferably polyclonal or monoclonal) The novel therapeutic compounds thave the following activities: cytostatic, cardiovascular-gen., cardiant, proposed the following activities: cytostatic, cardiovascular-gen., cardiant, antialeprotective, ophthalmological, antialematory, characterical, antialeprotective, ophthalmological, antiatheumatic, antipyretic, uropathic, antipyroid, gynecological, antiatheumatic, cardiovascular disorders, hypertensive, anticonvulsant, cardiovascular disorders, hypertensive, anticonvulsant, antiadepressant, antiadepressant, antiadepric, mootropic, antiparkinsonian, anticonvulsant, antimeration, antiparkinsonian, anticonvulsant, antimeration, antiparkinsonian, anticonvulsant, antiadepressant, antiadepressant, metabolic disorders, neuropathy or a behavioural disorder, and a sleep disorder. This sequence represents a metabolic therapy target peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The anti-IL-12 antibodies are useful in methods for diagnosing or treating IL-12 related conditions, e.g. psoriasis or multiple sclerosis. The antibodies are also useful for treating immune, cardiovascular, infectious, malignant or neurological disorders or diseases. The present sequence represents the amino acid sequence of human anti-Interleukin- 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New mammalian anti-IL-12 antibodies, useful for diagnosing or treating IL-12 related conditions, e.g. psoriasis or multiple sclerosis, as well as other for treating immune, infectious, malignant or neurological

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC preventing cancer, inflammation, autoimmunity, allergy, asthma, central C nervous system (CNS) inflammation, rheumatoid arthritis, multiple cc sclerosis, AIDS and bacterial, fungal, protozoan and viral infections and CC for modulating an immune response in a mammal, where the immune response is downregulated or enhanced. SAF-3 antibody is useful as diagnostic and CC therapeutic reagents, to subcharacterise cell populations during CC haematopoistic development, to treat anaemia, as a diagnostic marker to distinguish between different forms of cancer, to purge bone marrow ex CC vivo of cancer cells expressing SAF-3, as a tool to aid in the ex vivo CC expansion (proliferaction and/or differentiation) of haematopoietic componentor cells expressing SAF-3, as a tool to aid in the ex vivo CC progenitor cells expressing SAF-3, as a tool to aid in the ex vivo CC progenitor cells expressing SAF-3, as a tool to aid in the expension (proliferaction and/or differentiation) of haematopoietic components or the periphery and as a stimulus in vivo for stem cell components or the periphery and as a stimulus in vivo for stem cell components or the periphery and as a vivo chemoprotective agent. CC expansion (profising immunoglobulin complementarity determining region (CDR) of SAF-3 antibody and its nucleic acid is useful to configure complementarity determining the effect of added compounds on the production of meNA and polypeptide in dells. The present sequence is complementarity determining region (VK), which binds to SAF-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

Also described are the following: identifying (M1) antibodies specific to cancer cells; generating a phage displayed antibody library (S) using cells collected from subjects immunized with cancer cells, removing CC using cells collected from subjects immunized with cancer cells to generate a cell-library, and recovering from the sub-library members that display CC antibodies that bind to the cancer cell, or contacting cancer cells with CC a hapten, generating a phage displayed antibody library using cells CC collected from subjects immunized with cancer cells, removing members of the library that bind to human red blood cells to generate a sub-library, and recovering from the sub-library members that display antibodies that bind to the cancer cell; an isolated nucleic acid (II) encoding (I); an cexpression vector (III) comprising (II); a host cell (IV) transfected CC with (III); and an antibody that binds to Cdcpl (M1) Is useful as a cherapeutic for cancer, for detecting cancerous cells in vivo (preferably prostate cancer cells), and for delivering a variety of cytotoxic drugs including CC charapeutic drugs, a compound emitting radiation, molecules of plants, CC upper separation or bacterial origin, biological proteins, and their mixtures. The present sequence represents prostate cancer cell antibody light chain cC CR3 SEQ ID NO:65.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The present invention relates to novel human Severe Acute Respiratory Syndrome (hSARS) viral nucleic acid and protein sequences derived from a Chars virus having China Center for Type Culture Collection Deposit CC Accession No. CCTCC-V200303. The present invention also relates to novel nucleic acid molecules (1; ADT41483 or ADT41485) encoding a nucleocapsid-CC (N) or spike (S) gene protein of a hSARS virus. Also disclosed are methods for detecting the presence of a N- or S-gene of the hSARS virus or of the protein in a biological sample and identifying a subject confected with the hSARS virus. The hSARS virus, nucleic acid and protein sequences are useful as vaccines for diagnosing or treating SARS. They care also useful in clinical and scientific research applications. The hSARS virus genome (ADT39027) was obtained and the amino acid sequences of all three reading frames were deduced from the complementary strand. ADT40501 is the full-length protein encoded by the first reading frame of the complementary strand and ADT40121. ADT40501 are the peptides from the complementary strand and ADT40121. ADT40501 is the full-length protein encoded by the first protein encoded by the first protein encoded by the full-length protein encoded by the third reading frame of the complementary strand and ADT40977 is the full-length protein encoded by the third reading frame of the complementary strand and ADT40977 is the full-length protein encoded by the third reading frame of the complementary strand and ADT40977.
New nucleic acid molecule encoding nucleocapsid- or spike-gene protein of a human Severe Acute Respiratory Syndrome (hSARS) virus, useful for diagnosing and treating SARS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example; SEQ ID NO 1387; 200pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid molecule consisting essentially of, and/or hybridizes under stringent conditions to a fully defined nucleotide sequence of 16-25 base pairs (bp; SEQ ID NO: 2471-2476), or its complement. The methods and compositions of the present invention are useful for the detection of the virus causing Severe Acute Respiratory Syndrome (SARS) in humans using a real-time quantitative polymerase chain reaction (PCR) assay. They can also be used in treating, ameliorating, managing or preventing SARS. This sequence corresponds to a partial SARS protein sequence from the complementary reading frame 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ameliorating, or preventing the virus causing overs syndrome in humans using a real-time quantitative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid molecule useful for detecting, treating, ameliorating, or preventing the virus causing severe acute respiratory
                       New isolated human severe acute respiratory syndrome useful as vaccine for diagnosing or treating SARS or scientific research applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 07-OCT-2004.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Virucide; Severe Acute Respiratory Syndrome; SARS; vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC The present invention relates to novel human Severe Acute Respiratory CC Syndrome (hSARS) viral nucleic acid and protein sequences derived from a CC hSARS virus having China Center for Type Culture Collection Deposit CC Accession No. CCTCC-V200303. The hSARS virus, nucleic acid and protein CC sequences are useful as vaccines for diagnosing or treating SARS. They CC are also useful in clinical and scientific research applications. The CC hSARS virus genome (ADT36557) was obtained and the amino acid sequences of all three reading frames were deduced from the complementary strand. CC ADT37650 is the full-length protein encoded by the first reading frame of the complementary strand and ADT37651-ADT38131 are the peptides from the CC first reading frame protein. ADT38132 is the full-length protein encoded by the second reading frame of the complementary strand and ADT38507 CC ADT38506 are the peptides from the second reading frame of the full-length protein. ADT38507 CC is the full-length protein encoded by the third reading frame of the CC complementary strand and ADT38507 the full-length protein encoded by the third reading frame of the CC complementary strand and ADT38507 the full-length protein encoded by the third reading frame of the CC complementary strand and ADT38508-ADT39012 are the peptides from the CC third reading frame protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of test molecules (particularly peptides) with immobilised CCR5, and then identifying those molecules which bind. The invention also relates to CCR5-binding molecules identified using the method of the invention, methods for identifying consensus motifs for CCR5-binding peptides, a transfer vector encoding tagged CCR5, a computer-aided methods for determining the relative binding affinity of a test molecule to CCR5 and a computer aided drug screening assay that utilises the three-dimensional structure of CCR5. Compounds identified using the methods of the invention are useful for treating or preventing HIV (human immunodeficiency virus) infection or AIDS (acquired immunodeficiency syndrome) in a patient. The methods of the invention may also be used to identify agonists or antagonists of the interaction of CCR5. Sequences AAM52204-AAM52805 and AAM52804 represent specifically claimed CCR5-binding motif for CCR5 and AAM52804 represent specifically claimed CCR5-binding motification of identify claimed CCR5-binding motification of identification of identificatio
The invention relates to characterizing phosphorylated polypeptides in a sample comprising digesting the polypeptides with a protease thus generating test peptides, and collecting a fraction of test peptides that enriched for positively charged peptides. Also included are a method (comprising determining the presence, absence or level of one ore more phosphorylated peptides as identified above in cells having a cell state and determining the degree of correlation between the presence, absence or level of phosphorylated polypeptide with the cell state), an isolated peptide of 5-50 amino acids comprising an amino acid sequence that is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Characterizing phosphorylated polypeptides in a sample comprises digesting the polypeptides with a protease thus generating test pand collecting a fraction of test peptides that enriched for posicharged peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-JUN-2004; 2004WO-US017613.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-MAR-2005

```
CC (and which comprise a phosphorylation site within the subsequence), an CC isolated polypeptide selected from any of the polypeptides listed in the CC specification and is modified at a modification site, an isolated peptide CC comprising a mass spectral peak signatures. a method for identifying a CC treatment that modulates phosphorylation of an amino acid in a target CC polypeptide, a method for generating a peptide standard, a pair of CC peptide standards comprising the peptide obtained (where the peptide is CC phosphorylated and a corresponding peptide comprising an identical amino acid sequence but which is not phosphorylated), a system (comprising a CC computer memory comprising data files storing information relating to the identifying characteristics of positively charged peptides, and a data canalysis module capable of executing instructions for organizing and/or capating to the identifying characteristics of positively charged peptides and comprising characteristics of positively charged comprising data crelating to the identifying characteristics of positively charged peptides and comprising instructions for organizing and/or searching the capable of executing instructions for organizing the comprising characteristics of positively charged competides and comprising instructions for organizing and/or searching the capable of characterizing phosphorylated polypeptides in a computer competides in a sample. The present sequence is a peptide from a human phosphoprotein, containing a phosphorylation site, identified by the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 subsequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of any of the protein sequences given in the specification

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score

Eur. J. Biochem. 221:111-1116(1994).
-!- FUNCTION: This is the heme A-containing chain of cytochrome c oxidase, the terminal oxidase in mitochondrial electron transport.
-!- CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-MAY-2000, sequence version 1.
